So done study on the Knowledge Picture Nurse about implementation documentation nursing at the Karo Health Center, Pematangsiantar City. Researcher, carried out in July -September 2022 with population 10 respondents. Zero fetch done with total sampling technique ie whole respondent made sample. Study This show that Majority have knowledge Enough that is as many people (40%) whereas minority have knowledge Good that is as many as 3 people (30%) and knowledge not enough that is as many as 3 people (30%). Characteristics nurse Karo Health Center, Pematangsiantar City majority have aged 31-40 years that is as many as 5 people (50%), the majority type sex woman namely 8 people (80%), have HI Diploma education namely as many as 9 people (90%), the majority work for >10 years that is as many as 6 people (60%). Majority have knowledge enough that is as many as 5 people (50%). Karo Health Center can know causing problems documentation no complete and optimal so can do programs that can increase quality documentation care nursing so that can increase quality services at the health center.</p> <p>Keywords:</p> <p>Knowledge, Documentation, Nursing</p> <p>This article is licensed under a Creative Commons Attribution-ShareAlike 4.0 International License..</p> 

1. INTRODUCTION

Nursing is one profession perpetrator giver service health, have role important in determine success health in a manner whole. Service nursing is service professional as integral part of service based health knowledge and tips nursing [15].

Nurses have position important in produce quality service health At home sick , because the service it provides based on bio- psycho - social -spiritual approach is unique and executed services for 24 hours and continuously , p This is excess alone compared profession health others (Ministry of Health Republic of Indonesia, 2009). Quality care Nursing is strongly influenced by quality service health and even often be one factor determinant image institution service in the eyes society. For evaluate quality service nursing needed exists standard practice nursing which is guidelines for nurse in carry out care embodied nursing in form of the nursing process Good from assessment until evaluation [15]. Standard care nursing function as guidelines nor reject measuring in implementation practice nursing to suit with values professional, ethical and responsible answer [5].

Activity documentation care nursing is very necessary & deep increase quality service. According to [7] documentation is work record events and objects nor: activity gift services (services) that are considered valuable and important. Documentation is something written about circumstances patient comprehensively, service the care provided, as well as note k about proof for authorized individual.

Documentation can made as one indicator accountability nurse or not quite enough sue nurse that is nurse can being sued in a manner law. Besides that documentation care nursing Can analyzed and found set is a nurse violate code ethics, discipline or law. Implementation documentation carried out nurse Not yet done with ok. This can is known from many forms of documentation care nursing that doesn't filled with complete [10].

Karo Pematang Health Center Siantar own amount employee as many as 26 people, with background behind education nurse 10 people, 10 midwives, 2 public health people, 2 nutritionists, doctors 1 tooth, Doctor General 1 person and Assistant Pharmacist 1 person, Nurse dentistry 1 person, Environmental Health 1 person, Laboratory 1 person. Based on studies introduction made through interviews and observations against 10 people nurse at the Karo Pematangsiantar Health Center can is known that part big nurse that is as many as 6 people (60%) less understand about Standard 1 Care Nursing, and no apply Standard Care Nursing in accordance with standard Ministry of Health of the Republic of Indonesia. As many as 3 people (30%) are not in the data collection process systematically, using formats, grouping data yet fulfil biological, psychological, social and spiritual data criteria as well as much as 1 person (10%) in make diagnosis nursing Not yet fulfil the Problem Etiology Symptom (PES) component.

Based on these data, researchers want to do study about description level knowledge nurse about implementation care nursing at the Karo Health Center, Pematangsiantar City.

Formulation Problem

From background behind above, then formula problem study this is How level knowledge nurse about implementation documentation care nursing at the Karo Health Center, Pematangsiantar City.

2. METHOD

Type Study

Type study This is descriptive that is design study For get A description [10], this intended to know description level knowledge nurse about implementation documentation care nursing at the Karo Health Center, Pematangsiantar City.

Location and Time of Research

Research Locations

Study carried out at the Karo Health Center in Pematangsiantar City

Research Time

Study This will be held in July -September 2022

Population And Sample

Population Population in study This is whole nurse at the Karo Community Health Center, Pematangsiantar City that is as many as 10 people.

Sample

Sample study This is whole population made sample with use Total Sampling technique ie as many as 10 people.

Data analysis

Data analysis was performed in a manner univariate for characteristics of each variable independent and d gets description categorical so results analysis the presented in addendum. Given the frequency data form table distribution frequency

3. RESULTS AND DISCUSSION

Based on results research conducted about description level knowledge nurse about implementation documentation care nursing at the Karo Health Center, Pematangsiantar City Year 2017 then can discussed as following:

From the results study about knowledge nurse got that majority have knowledge Enough about documentation care nursing. Knowledge can influenced by various one of the factors is job. Monotonous and boring work can cause somebody That have attitude indifferent not indifferent. Attitude This Reduce interest somebody For look for information or get information. This in accordance with the theory of [1] which states that (nature carry out management care nursing condition one's work and mental burden greatly affect the implementation process Documentation nursing. Experience in carry out Documentation is also very influential short knowledge a nurse. This in accordance with theory [13] stated experience as source knowledge is something method for obtain truth knowledge with method repeat return acquired knowledge in solve other problems faced.

Can concluded that nurse ripening need given trainings for add experience in give care nursing. If seen from the length of time the majority worked already 510 years and supported that majority respondent Already own Diploma III education then implementation care nursing should already more. However moment researcher do interview with respondent they state that busyness with implementation internal target achievement activities health center. Need given incentive for every nurse in carry out care until documentation nursing So that Want to to spare time between busyness task tree health center.

4. CONCLUSION

After done study regarding implementation, description level knowledge nurse about Documentation care nursing at Pusk the Pematangsiantar City Health Scheme Year 20 Karo: Valid 17 with 10 respondents so can obtained results as following : Characteristics nurse Karo Health Center, Pematangsiantar City 2017 majority have aged 31-40 years that is as many as 5 people (50%) the majority type sex Woman namely 8 people (80%), have Diploma III education namely as many as 9 people (90%), the majority Work for 210 years that is as many as 6 people (60%). Majority have knowledge Enough that is as many as 5 people (50%)
